ETL Developer

Description

We are looking for two ETL Developers that will help to further develop our electronic invoice processing capabilities.

Responsibilities

- Develop and test extract, transform and load (ETL) processes using SSIS, .NET and Java code
- Develop web extracting code (web scraping)
- Map source system data to the operational data store models
- Maintain existing processes according business requirements/changes in source data.
- May participate as a programmer in other non-ETL projects.
- Learns and applies best practices and standard procedures
- Debugs own code with limited support
- Executes and monitors automated tests
- Performs manual verification and regression tests
- Pair programs with more senior members of the team

Skills required

- Minimum of 2-3 years experience with SQL
- Bachelors' Degree in the field of computer science, information systems, or software engineering or equivalent experience
- Experience with C# .NET programming
- Good understanding of web standards HTML, CSS, JavaScript
- Good presentation skills
- Experience working in a team-oriented, preferably international environment
- Able to prioritize and execute tasks according to schedule
- Strong understanding of relational database systems
- Strong written and oral communication skills
- Knowledge of secure development principles
- Fluent in English both verbally and in writing

Skills recommended

- Experience with SSIS or similar tools
- Experience of (telecom) invoice processing systems
- Knowledge of the Java programming language
- IT infrastructure knowledge
